☐ n/a

DUTIES:
Air Force Medical Service Specialists may work on the ground or in the air. In general, they're considered part of the nursing team, but their duties can be numerous and varied:
Basic duties inherent in any medical environment include managing patient records, taking vital signs, and managing patient care of a team member or leader from admission to discharge. This may include postoperative care, emergency life support, and even caring for dead or dying patients and their family members.
Medical service specialists also participate in and lead training exercises for other personnel. According to the Air Force Enlisted Classification Manual, training and instruction include "basic life support . . . periodic disaster training, fire drills, and evacuation procedures . . . [and] areas such as emergency medical technician and self-aid buddy care."
Some airmen may also be called on to act as independent duty medical technicians (IDMTs), operating without the supervision of a physician in small or remote postings. In these cases, everything falls on the IDMT, including "pharmacy, laboratory, bioenvironmental, public health, medical logistics, and medical administration duties."
Then, of course, an airman in AFSC 4N0X1 may also specialize as a licensed practical nurse (LPN). They may lack the officer's commission and independence of registered nurses (RNs) in the military, but an LPN holds a valued place in the nursing team. He or she performs many fundamental patient care functions, freeing RNs to concentrate on functions exclusive to their licenses such as patient assessment and teaching.
Finally, Aerospace Medical Service Airmen may perform other specialized duties such as aeromedical evacuation, allergy and immunization, neurology diagnostics, critical care, hyperbaric treatment, and hemodialysis.

EVALUATION PROCESS:
Evaluation will be based on the information provided and meeting a selection board, date to be determined.
MANDATORY REQUIREMENTS:

Knowledge. The following knowledge is mandatory for award of AFSC indicated:

4N0X1/X. Medical terminology, anatomy and physiology; nursing theory, techniques and procedures; nursing assessment; team nursing; patient needs; emergency medical treatment to include cardiopulmonary resuscitation; aseptic technique; medical ethics and legal aspects; prescribed drugs/immunizations and their administration; population health concepts; operating and maintaining therapeutic equipment; transportation of sick and wounded; risk management; military hygiene and sanitation; fundamentals of primary care management (PCM); preventive medicine and counseling techniques; physical examinations and standards, contingency operations, disaster preparedness and chemical warfare; flight physiology fundamentals; maintenance of the human weapon system; and operational readiness of the war fighter.
